Smart Sponge Bob Container

Abu Dalo, Majd
Al Sabbah, Ahmad

This research is aiming to change the unfavorable trick of trash and and carry it to the best solution (recycling), especially paper because it is the most commonly used at our schools. After making many interviews with environmentalists, and parceling a comprehensive questioner to many schools, it is found that the solution should be motivational and attractive, especially for children in the school age. Smart container is the solution that has taken more than 80% in the questioner. It can welcome you if you pass in front of it, and thank you if you put a paper in it. This process will be through Sponge bob voice and shape. After the applying this new solution, it is found that our smart container has become full within less than one school day. This success has guided us to reuse this paper to make educational means, and make an agreement with one of papers' manufactures to recycle them, in return that our school get number of brail paper without money. Finally research believes that motivation always can take our planet to the positive way in all issues, more than making punishments and fines.
