The Scrap Tires (Lost Treasure)

Aljasem, Abdulrahman

A big disaster happened in Kuwait where a huge fire started in the scrap tiers yard which cause emission of a very big amount of poison gases like [so2] and [co] that’s why I decided to look for a way to reuse the tiers by: 1-Designing a flexible wave barriers. 2-Designing a water bridge. I started with visiting (KISR), and I started official training to learn how to tide the tiers together and how to take some kind of sea reading and Finlay I found that my idea is very suitable for Kuwait because: 1-Low cost compared to the basic wave barriers. 2-Technically suitable for Kuwait and Arabic gulf type of marine environment . 3-Easy to re direction and to remove. 4-The mooring forces is expected to be smaller.
