Take Change

Vega Marquez, Karla

"TAKE CHANGE" is a control-oriented software who let you turn on and turn off all the electronic elements of your house or company as you want by a cell phone (lighting, setting of heating, security, etc.) just pushing a button on the screen. The transmission is by bluetooth, there are two ways to install, the first is wired and the second way is through a sophisticated prototype with two connectors that don’t require any configuration of power line in the residence or the company. The prototype was created to help people with mobility disabilities in the legs giving them the opportunity to control your home or your company. Another advantage is its price, since the cost is around $ 78 US dollars. TAKE CHANGE is software that consists solely of a control board open source, a bluetooth and a power circuit connected to the power line of the company or the home within a sophisticated wooden box with a set of LEDs color who indicate that is what is on, desides you can control it from any cell phone with Android operating system, after installing the software.
