Geo-Electricity

Al-Ogaili, Ali Hussein Abdulwahhab
Al-Naseri, Ahmad Abdulsalam Dawood

Our idea and purpose is to get a new reliable source of renewable energy by sample easy cheap and applicable way everywhere everytime by absorbing the negative energy charge (electrons) which is useless for us that is stored in earth as it s approved that earth is the biggest storage for negative charge (electrons) and connect it to sample devices to enlarge and elevate its performance by connecting it to the heart of the device the (magnetron) to convert it to a giant field of microwaves and at the end of the rope it ends just by converting the waves into electricity by (rectenna) In conclusion by this procedure we get the energy to supply whatever we need by the useless charge with a tricky enlarging way
