Find My Dog

Steele, David

Find my dog is a simple dog tracker that aims to overcome some of the problems that other dog trackers don’t solve. For example, it gives a live position of your dog and updates this position constantly to give a live feed of the dog’s position. The project also removes subscription fees by replacing GSM data transmission with radio data transmission. Removing the GSM aspect of a dog tracker also means that it will still work in areas where there is no signal. The product is waterproof, reliable and easy to use as it provides the location on an app specific to the product.
