Design and Construction of a Water Sport Bicycle

Bala, Umar

Auwal, Ahmad

With the advent of many new sports in recent times,the possibility of developing water sports related to the use of bicycles in water caught our attention.In furtherance of this idea,we set out to design and construct a model bicycle suitable for use in water.Several modifications were introduced into the conventional bicycle that enables our model water sports bicycle to maintain balance and stay afloat in water.The further development of this machine will open doors for the development of a number of several water cycling sport.
