Artificial Evolution

Lindblom, Martin

Evolution is a long and drawn-out process, this causes it to be hard to observe. The only thing that can be observed with certainty is the result of it. I found this to be a problem while studying biology during upper secondary school. It was hard to grasp how evolution works. Therefore this project is all about giving students the ability to get a deeper understanding of the mechanics involved in evolution. This I hope to accomplish by utilizing artificial intelligence to create a program that illustrates evolution in an engaging and correct manner.
