Morales Guerrero, Abigail

One of the problems of the infrastructure of EPO 102, is the scarcity of water. This project will cover 100% of the demand for water in the rainy season and 48% annual, with a significant cost savings and a positive environmental impact. With more funding will have better hygiene in bathrooms and lower incidence of disease. Students could achieve more awareness on the rational use of water and to be able to organize thematic workshops.
