Portable Thermoelectric System

Qasim, Oula (School: Baghdad Ishik Girls College)
Kadhim, Manar (School: Baghdad Ishik Girls College)

It is a simple cooling system that works to cool the samples by keeping their temperature low. And it contains a charger to keep it working and this charger has many ways to work, first through the use of battery or shipped by connecting to the place dedicated to the cigarette in the car. Also, as mentioned above the heat is working to damage the samples. We have placed that heat as an auxiliary to the work of the shipper. The charger recharge itself by absorbing the heat of the sun to help the system work in cooling the samples.
