Save It, Repeat and Eat It

Mohammed, Rashan (School: Ronaki Duhok Ishik Girls College)
Brifkani, Dinya (School: Ronaki Duhok Ishik Girls College)

During a year plants provide large amounts of matter full of cellulose. The biggest part of matter can be found in the crops, leaves and grass. People do not use this matter enough and even burn one part of it. The reamins of tea, cofffee, paper or even cotton wool full of cellulose can be found in our home. All these materials can cause pollution or they slowly connect to the natural-ecological material chain. There are organisms ready to decompose the matter very quickly and beome great ecologists. During this process we can get very valuable food full of minerals, vitamins and amino-acids. WHY DO NOT WE USE IT? First we have to collect these materials. Then we have to mix them in certain balance. The goal is to save the Earth by collecting materials that are full of cellulose and to produce healthy high-quality food.
