Are you tired of too many wires everywhere? Have no way to plug in all devices due to transformers and bulky plugins? Do you find it inefficient to have 2 or 3 power strips by the side if your table only to use a few of the slots since power adapters take up too much space that they cover the other slots? Worry no more! This device can manage your wires. It efficiently extends the outlet on the power strip to get rid of the clutter caused by power adapters. It works well with power transformers, computers, monitors, scanners, printers, and other devices. Our project “Smart Extension Cord” is a simple and affordable solution to extend the length of your power cords. It saves space and solves the problem caused by bulky plugs. If a long wire is needed, simply plug extension cord to get the desired length without using too long an extension cord. It provides an ideal extension for offices, power clocks, lamps and other household appliances. Smart extension cord is adjustable and allows you to increase and decrease the length of the cord.
