GloveSpeaker

Dolmagambetov, Karen (School: Nazarbayev Intellectual School, Aktobe)
Taumergenov, Nurdaulet (School: Nazarbayev Intellectual School, Aktobe)

The main aim of our project is to create a device which will help to mute people to communicate with other people, who do not know language of gestures. Problem of our project is creating a device, which will determine what mute person would like to say with 100%ly accuracy and making project available in cost and using. To create this project we made survey and organized group of students, who study in “Special school-dormitory for students with hearing problems of Aktobe”. This project is so relevant and have a big social importance, because problem of mute people communicating is still not-solved, that is why mute people feel detachment. The novelty of project consists that, there are a lot of mobile apps for mute people with which help user can push the button and needed phrase will be sounded, but while user choose the phrase, switch on his telephone they will spend a lot of time, that is why GloveSpeaker glove is the best solution of deaf-mute people communication.
