Smart Green Farm

Obeidat, Saja (School: Um-Alsummaq Southern Secondary School)

The idea of the project came up from many problems that affect the agriculture environment so that I provided solutions by using the renewable energy and the (IOT) system to solve the following problems : 1. Lack of water resources 2. Fires occurring to the farms or forests 3. Frost that damages the crops and soil I put sensors that solve these problems by using application that is connected with the sensors so it gives reads which I can take action through it and its all automated. This project has attempted to give solutions through the smart green ways.
