Esteban Perez, Hany (School: Colegio de Estudios Cientificos y Tecnologicos del Estado de Puebla Plantel Cholula)

Today pollution is considered important, since it has damaged in large quantities by the unconsciousness of the human being by not using properly some products that affect it, some of them are metal containers, most seen in paint cans, soft drinks, (canned) foods, since in most cases, people are used to throwing them away, which still causes damage to our environment. Thus, CaxBiotli, a biodegradable container that was made based on completely natural and biodegradable ingredients, which can replace metal containers and can also be a circular economy. In fact, that it's a natural product, as a result of its being biodegradable, it can be used as fertilizer for plants or as food for animals or insects that come across the container.
