BlueScript: An Open-Source Solution for Dyslexia Treatment

Suh, Jaewoong (School: Korea International School, Jeju Campus)

BlueScript is an open-source software designed to provide accessible and effective dyslexia treatment through scientifically backed training modules aimed at improving visual perception and sequential processing. Developed with guidance from Dr. Segeun Park, who has over 20 years of experience in learning disability research, BlueScript is available as a web app, and Progressive Web App (PWA), ensuring broad accessibility and offline usability. Unlike existing high-cost proprietary tools, BlueScript is designed to be free and customizable, making dyslexia treatment accessible to everyone. The project aims to offer a cost-effective alternative for dyslexic individuals worldwide, promoting inclusivity and fostering community-driven development.
