Mutasd! - Interactive Software for Learning and Practicing Sign Language

Pazsák, Zsófia

The integration of deaf-mute people in our everyday life has been always a challenge for our society. Our educational application Mutasd! opens the door to anybody to easily learn to communicate with deaf-mute people. The application is intuitive and user friendly and the methodology applied for learning sign language provides an easy and entertaining way for practicing. The minimalist principle design applied during implementing the application makes it easy and entertaining to use. Next to using the existing sign vocabulary present in the application the user has the possibility to easily create new signs without technical knowledge. Another important feature of the application is its availability on multiple platforms making it possible to reach a large number of people.

Awards Won:

Fourth Award of $500
