Now a days, population of the world increases high speed with same ratio people requirements are increasing day by day. Everywhere we can see a lot of cars also amount of cars increasing day by day. Cars make our life better and faster when we use them carefully. On the other hand there are benefits as well as harmful using car in our daily life as accident. We face thousands of problems every day and everywhere. We were almost in an accident while my father was driving. This happen because of the low amount of view angle. It is happened because of the car “cant rail”. I think it is obstacle in front of the eyes. Actually while turning with a car. It’s inspired me to find this idea. I asked question myself how can I solve this problem. If it’s happened on us it can be for others.
